

Start

Begin the process here. This is the initial step of our flowchart, setting the stage for the following actions.

QR Code Scan

The public scans a QR code or enters the OTVC. The backend verifies the data against the registered credentials.

Officer Registration

Police officer registers using badge ID. The backend generates a unique ID and maps it to the officer's credentials.

ID Verification

Collect all necessary data and resources required for the process. This step ensures we have everything needed to proceed.

Verify Data

Check with the badge number and police identity for verification. With a secure Auth id verification

Display Result

The app displays the verification result for the public user. This informs them of the officer's validity.

Data Logging

All interactions, including scans and verifications, are logged in the cyber officer system for auditing purposes.

End Process

Conclude the process once all steps are completed and logged. This marks the end of the flowchart and the overall workflow.
